

Acqueon Engagement for Cisco Webex Contact Center

Outbound and Omnichannel Campaign Management for Webex Contact Center

Acqueon Engagement for Cisco Webex Contact Center lets you orchestrate campaigns and proactively engage with customers for sales, service, and collections.

Highlights

Cisco Webex Contact Center Dialer Integration

Acqueon leverages Webex Contact Center for preview and progressive dialing modes. Webex Contact Center provides Call Progress Analysis (CPA) and Answering Machine Detection (AMD) to connect agents to live calls and maximize the use of their time.

Omnichannel Communications

Acqueon Engagement for Webex Contact Center lets you engage in 2-way conversations with customers using voice, email, text-SMS, and messaging channels. Campaigns can leverage live agents or be automated using voicemail drops and conversational bots.

Contact Data and Segmentation

Acqueon Engagement for Webex Contact Center provides an import utility, pre-built integrations, and APIs to load contacts from multiple sources. The data onboarding process includes duplicate records resolution and the scrubbing of known litigators. A comprehensive set of tools is also provided for list segmentation and data aggregation.

Data Privacy and Compliance

Acqueon Engagement features numerous compliance checks that can be easily activated including Do Not Call (DNC) number filtering and segmentation of contacts based on Prior Express Written Consent (PEWC). These tools enable you to conform to privacy regulations including TCPA, GDPR, CCPA, and Ofcom.

Campaign Optimization

Acqueon Engagement includes a powerful Contact Selection Strategy (CSS) builder that lets you prioritize contacts with the utmost precision. Contact Selection Strategies can leverage AI-predictions including Best Time To Call (BTTC), best channel to use, and propensity models (e.g. buy or churn).

Monitoring and Control

Acqueon Engagement lets you control the execution of all campaigns in real-time from a unified dashboard. Campaigns can also be activated or scheduled, and administrators can make instant changes or clone campaigns without IT support.

Reporting

Acqueon Engagement provides a comprehensive set of real-time and historical campaign reports.

Built for Webex Contact Center

Acqueon Engagement is natively integrated with Webex Contact Center; it leverages its agents and skills management. Calls are distributed using their routing. The outbound agent experience is built in the Webex Contact Center Agent Desktop, allowing support for blended operations.

Features

Omnichannel engagement

- Omnichannel engagement
- Voice, 2-way SMS, conversational/messaging bot, and email
- Campaign callbacks
- Voice, SMS, and email notifications

Dialing and Pacing (through Webex Contact Center)

- Preview and progressive dialing
- Call Progress Analysis (CPA) and Answering Machine Detection (AMD) via Webex Contact Center
- Voice, busy signal, fax, answering machine, disconnect, no answer detection

Compliance

- 3 levels of Do Not Call (DNC) controls
- Mobile numbers and Prior Express Written Consent (PEWC) handling
- Upload and runtime controls
- Abandoned rate control
- Time zone management by state, ZIP, or area code
